## International Standard Commercial MPV

## BRIEF INTRODUCTION

SAIC Motor Corporation Limited (SAIC Motor) is the largest auto company on China's A-share market (Stock Code: 600104), and has a total equity of 11 billion shares.

SAIC Motor's car sales hit 5.62 million units in 2014, up 10.1 percent on the previous year and further consolidating its leading position in the domestic auto market. In 2014, the company climbed 25 places to rank 60th on the annual Fortune Global 500 list, thanks to its $102.25 billion in revenues. It marked the 11th time that the company had made it onto the list of the world's most powerful companies.

## SAIC VISION

For the satisfaction of our customers
For the interest of our shareholders
For the harmony of our society
We will build SAIC into an automotive company with outstanding brands,brilliant employees,core competitive competencies and international operation capabilities

## SAIC VALUE

Satisfaction from customer
Advantage through innovation
Internationalization in operating
Concentration on people

## Brief Introduction of SAIC MAXUS Automotive Co., Ltd.

Established on 21st March, 2011, and located at No.2500, Jungong Road, Yangpu District, Shanghai China, SAIC MAXUS Automotive Co., Ltd. (hereinafter referred to as "SAIC MAXUS") is a wholly-owned subsidiary of SAIC MOTOR CORPORATION LIMITED. With the registered capital of 2.35 billion RMB, SAIC MAXUS owns one wholly-owned subsidiary company—Wuxi Shenlian Special Purpose Vehicle Co., Ltd.

As the production base of SAIC MAXUS, Wuxi Base manufactures V80 and G10, covering light bus, MPV, van, minibus and etc. After the completion of the Phase III of Wuxi Base, an annual product capability will reach to 200,000 with V80, G10, Pick-up and SUV, nearly 500 series of products.

MAXUS has become one of the most influential brands in commercial vehicle industry, and honored to serve for the APEC and other international affairs. Meantime, overseas business has expanded in great momentum, covering more than 30 countries and regions, with a CKD plant in among indigenous auto brand in the segment. In the end of 2014, MAXUS has been exported to Malaysia and a joint-venture company in Thailand also been set up. The export volume ranks No.1 among indigenous auto brand in the segment. In the end of 2014, MAXUS has been exported to Ireland, and in the year of 2015, to Britain, accomplishing the first step of brand strategy of Back to Birthplace. In the future, MAXUS plans to hold the share of Holland and Turkey, and other EU market, and then the world.

The products of MAXUS have successfully entered more than 30 countries, including Ireland, Australia, New Zealand, Malaysia, Thailand, Saudi Arabia, and Chile and so on. Basing on systemic capability of Commercial Vehicle Development Process system, global supply and purchase system, TS16949 quality control system, flexible SCPS lean production system, intelligent information management system and global marketing system , adhering to the brand core values of "Technology, Trust and Ambition", MAXUS dedicates to be an internationally competitive auto company and achieve sustainable development both of employees and the company to provide high-quality commercial vehicle product and services to the consumers and create more value for customers.

# Three Core Brand Values

### • Driven by technology, progress with the future of the industry

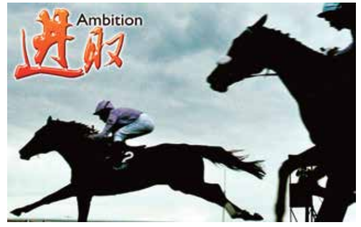
SAIC MAXUS gathers leading resources from worldwide and is driven by technology and sees industry leadership as its mission. SAIC MAXUS dedicates to establish a technology conceptual platform that is competitive internationally. As the pioneer that promotes the industry revolution, SAIC MAXUS moves forward together with the future of the industry.

### • Rooted by trust, marching to the future of consumers

SAIC MAXUS dedicates to meet the needs of global customers and progress with the future of the consumers based on trust and with the support of global R&D, standardized manufacturing, Fortune 500 spare part supplier, carefree service and various other competitive advantages.

### • Guided by ambition, progress with the future of time

SAIC MAXUS continuously push for the development trend of new era commercial vehicle with its enterprising and innovative spirit. SAIC MAXUS dedicates to become a comprehensive commercial vehicle producer with a broad product category, leading the trend and progressing with the future of the era.



One century ago,
British LDV model came into birth,
which can be traced back as the legendary
start of Maxus V80.

**1896** Legendary Origin

1949
Morris J was launched

**1907 Fast Development**
Lancashire Group
in fast development
was officially re-named as
Leyland Motor.

**1917** Royal Family's Favor

As the house of Windsor came into power,
Leyland models had the honor of
joining imperial motorcade.
1974-1982
Sherpa, Leyland was launched

**1981 Leyland**
**Joined In Rover**
Freight Rover department was established in 1981,
marking Sherpa's joining in Rover Group

**1987** Second Transition

1982-1984
Sherpa Freight Rover
became a part of Land Rover brand.

1989-1993
200 series and Leyland
DAF were launched.

1984-1989
Freight Rover 300 Series
Large Edition of 200 Series.

Commercial department in Rover Group joined in DAF
Trucks Group, turning Freight Rover into Leyland DAF.

1989-1993
400 Series Leyland DAF

**1990**

1993-2006
LDV Co. Ltd was established.
Pilot LDV was brought out as
a narrowed edition of Convoy.

**1993 New Start**
LDV Limited was
officially established.

**2004**
**Birth of New Vehicle**

A new model of commercial
vehicle named Maxus, the
prototype of LDV V80, was
created by LDV, becoming a
shining star in the history of
commercial vehicle.

2004-2009
LDV Maxus

**2009 Legendary Rebirth**

SAIC acquired the intellectual
property right of LDV MAXUS.
The lengendary "MAXUS"
came to the stage .

**2012**

MAXUS V80
light truck officially launched,
satisfying customers' needs
on refitting and gaining
favor of users.

**2012**

**2011**
**Legend Continues**

SAIC launched MAXUS V80,
with overall upgrading on the
basis of LDV Maxus original style.

**2013**
**Leading the Future**

G10 concept car

G10 concept car was officially
launched in April,2013

MAXUS G10(MPV) was off launched
in Feb,2014

**2014** Great and Valuable.
Built for your future!

SAIC MAXUS EV80
Debut of pure electric wide-bodied
light passenger vehicle in China

Launch of the first AT wide-bodied
light passenger vehicle in China

New G10

**New G10**
**Coming for You**

**2015** Dual Power Brings You to Anywhere

Automobile Shanghai
Debut of the first pure electric MPV EG10
and flagship edition in China

## Advanced technology standard

With the advanced production technology standard and the world's top 500 suppliers, SAIC MAXUS applies passenger car's production standard to produce commercial vehicles. With advanced technology, standardized operations, its quality takes the lead in the industry and is comparable to passenger cars and superior to its competitors' standards.

**· Advanced stamping process**

A total of 220 million RMB has been invested to build the second phase of stamping project with the application of high-speed automated press line which is leading in China. It achieves high production efficiency, stable and reliable quality stampings, flexible and large production line, fast retooling, high sprint, and lower vehicle costs. It also ensures the same standard of passenger cars and being better than the rivals..

**· Coating production lines and coating process**

A total of 193 million RMB has been invested to establish a new coating production line, equipped with fully automatic machine operation with safety and energy saving systems as the carrier, and first-class spray room, drying room, etc. It adopts the lead-free electrophoresis, one-coat paint technology, paint process standards of passenger cars, electrophoresis + phosphate + floating coat + topcoat. The new equipment has a stable parameter, high output accuracy, less coating defects and high surface quality.

**· Whole vehicle electrical equipment test**

We adopt the globally leading German DSA DT2-diagnostic tester to conduct overall systematic test, diagnosis and maintenance on electrical equipments. Meanwhile, it can execute ECU diagnostic tools and programming. With platform design, the system has rich configurable parameters, lower static power consumption, and stable and reliable performance.

**· Whole vehicle test line (wheel alignments and rotating hub)**

We introduced the rotating hub and wheel alignment form U.S. Fori Company, and the integrated advanced lighting and smoke detector meter. Our wheel alignments use the most advanced 3D laser measurement technology which can accurately measure four angles. With good ground and handling, there won't be deviation phenomenon.

Rotating hub station is used to measure the braking force, blocking force, horn sound level, etc., which will be related to the vehicle, in particular the high-speed controllability, safety and the reduction of additional tire wear; therefore it is the key quality measurement of the vehicle assembly.

**· Standard test track**

Drawing on the experience of the advanced passenger vehicle inspection process, a 400-meter standard test track is built inside the factory. It covers a 60-yard 100-meter acceleration test track, a small bad road (Belgium, nail head, rough stones, sinking manhole cover, sine wave, blue basalt, washboard road) test track and a proving ground parking ramp. We focus on the measurement of vehicle dynamic noise and parking brake performance so as to meet the vehicle performance test and work out the vehicle dynamics abnormal sound problem.

## Strict quality standards

Under the prerequisite of safety, SAIC MAXUS always pursues the strictest quality to secure its leading position in the industry. We are dedicated to create a perfect car with low fuel consumption, high safety, steady driving and super convenience.

**· System Standard**

Passed ISO9001 and ISO/TS16949 automotive industry quality management system

**· Six quality criteria embody our standard**

CMM, tunnel lighting, road test, three high-test, one million kilometers testing, and military rain test

## Strict material standards

SAIC MAXUS always take the environmental protection as the mission to fulfill the corporate social responsibility. We focus on every small detail, dedicating to adopting the environmentally friendly materials of passenger cars in the field to commercial vehicles, and becoming the green industry pioneer.

**· Environmental standards**

Environmental water-soluble paint

We take the lead in the use of environmental-friendly water-soluble paint in industry. Supplied by Kemit, the pre-treatment chemicals ranked the first in industry. It does not contain hazardous materials such as toluene and xylene and greatly reduces VOC emission of water soluble paint and RTO purification system. Paint film is glittering, translucent and flexible, very good at water resistance, abrasion resistance, aging resistance, and yellowing resistance.

Green interior materials

We use passenger car grade environmental protection material in the vehicle, without any harmful materials.

No asbestos

We never use asbestos in order to protect health and become the industry green pioneer.

Lead-free electrophoresis

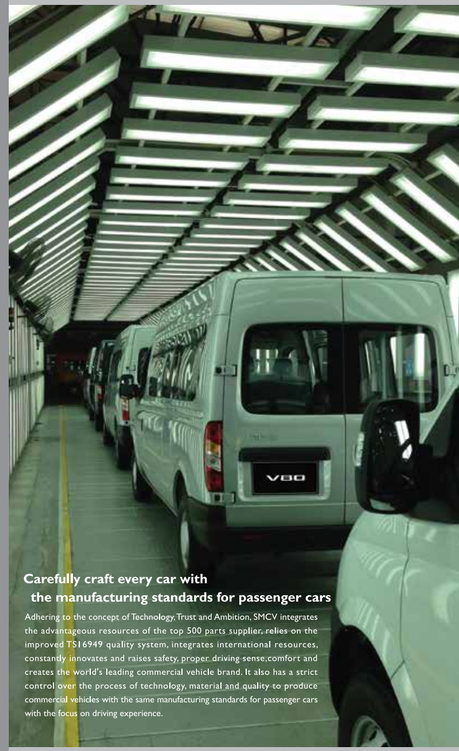
In the four-step paint process, we use PPG ED6.0 lead-free electrophoresis to increase environmental protection and reach the durable materials standard of passenger car.

**· Durability material standards**

We adopt the 50% ultra-high-strength steel and 50% high-strength steel ( much higher than the 30% high-strength steel and 70% general strength steel by the competitors). We guarantee that the steel won' t be corroded in 10 years, 44% higher than the national standard of 7 years.

**· Parts standard**

The world's top 500 parts suppliers



**Carefully craft every car with the manufacturing standards for passenger cars**

Adhering to the concept of Technology, Trust and Ambition, SMCV integrates the advantageous resources of the top 500 parts supplier, relies on the improved TS16949 quality system, integrates international resources, constantly innovates and raises safety, proper driving sense,comfort and creates the world's leading commercial vehicle brand. It also has a strict control over the process of technology, material and quality to produce commercial vehicles with the same manufacturing standards for passenger cars with the focus on driving experience.

# MAXUS V80 Series

## Agile Control

As a wide-bodied light passenger vehicle that is equipped with 6AMT automated manual gearbox, SAIC MAXUS V80 is always able to bring you with more convenient driving experience and more efficient power transmission. The core technology of V80 is originated from F1 that has smart gear shifting and clutch-free shifting and is 5% more fuel efficient. 5MT, 6MT gearboxes and other choices are also available. The chassis is professionally tuned by MIRA. The driving experience is

## High Efficiency, Low Consumption

The engine adopts the third generation Bosch high pressure common rail fuel injection system with 4 cylinders and 16 air valves. The fuel pressure can reach as high as 1,800Bar, facilitating more complete combustion.
Fuel consumption per 100km can be as low as 5.4L. Engine adopting VGT technology that meets National V emission standards is available for choice. 1,400rpm per hour turbocharge is immediately put to work, realizing the power performance that has low rotation speed but high torsion. The engine is able to perform with high efficiency at both high speed and low speed. Maximum power output can reach 136hp with maximum torsion of 330N.m.

## Spacious Interior

SAIC MAXUS V80 has the highest space utility rate among peer products (19% higher than peer products). Distance from the ground is only 540mm (lowest among peer products), while the inner space has high ceiling, enabling passengers to standup straight inside the car. To satisfy the different demands for the number of passengers, V80 provides flexible seating layout. The seats can be folded and flipped to assist diversified vehicle usage. in addition, V80 also provides design with seats that can be flipped sideways to make more room. Sliding doors and large-size rear doors are designed to make loading, unloading and moving within the vehicle ever easier. Different layouts ranging from 2 to 25 seaters are available to meet the different needs. The 15 seater model can be categorized into "small vehicle/level 2 height".

## Reliable and Durable

SAIC MAXUS integrates the global resources of SAIC Motor. The core parts of V80 are supplied by Fortune 500 companies with reliable quality. The vehicle has also passed world's most rigid ECE automobile accreditation and road tests in "three extreme" environment (high temperature, low temperature, high altitude) and various other extreme environment. Accumulated test drive exceeds one hundred kilometer. The vehicle is exported to 35 countries and regions including UK, Ireland and Australia.

## Comprehensive Safety

The vehicle is equipped with ABS+EBD+BAS and four-wheel brake system. Optional new generation BOSCH ESP9.1 electronic stabilization system, including TCS, RMI, HHC and other multi-functional modules are also available to improve driving stabilization. The full-support car frame meets the ENCAP standards. More than 50% of the car body adopts high strength and extra-high strength steel, which creates a reliable safety guarantee actively and passively.

# Product Series

## MAXUS V80

**Innovation on International Standard**
**Establish Precedents on Commercial MPV**

MAXUS innovates on international standard and brings together the wisdom from the eastern and western countries. By virtue of group advantage, it has successfully developed vehicle series of MAXUS V80 Deluxe, MAXUS V80 Mini Bus, MAXUS V80 Cargo Van and MAXUS V80 Vehicles for Special Purpose. It has provided multiple choices with long and short wheelbase; low, medium and high roofs. With a production standard far exceeding auto makers of its kind, MAXUS is a leader in technology, establishing industry benchmark in safety, quality, environment protection and fuel economy. For years, MAXUS has adhered to the core brand value of "Technology, Trust , Ambition" providing customers with commercial MPV with high starting-point, high quality and high standard.

# Mini Bus

**With international resources and leading technology, SAIC MAXUS is dedicated to producing the best vehicle of the class. The humane and comfortable technology of Mini Bus ensures you an enjoyable travel from departure to arrival.**

**High Efficiency, Low Consumption**
- The third generation of BOSCH high-pressure common rail fueling system
- Optional VGT variable geometry turbocharger technology
- Eco-D Euro V Emission Standard Engine

**Agile Control**
- Optional 6AT transmission for whole series
- British MIRA Professional chassis tuning
- Dual mass flywheel technology from Europe

**Spacious Interior**
- Foldable back-row seat, optional side-folding seat
- Seating combination from 9 to 19 seats
- Seats can be folded in multiple modes

**Reliable and Durable**
- Overseas ECE regulation accreditation (United Nations Economic Commission for Europe Automobile Regulation)
- 1,000,000km road test accreditation
- Blending the advantages of fortune 500 supplier
- The vehicle is exported to 41 countries and regions including UK, Ireland and Australia

**Comprehensive Safety**
- The most comprehensive active safety system
- Optional latest generation BOSCH ESP9.1 electronic stabilization assistance system
- Optional double airbags
- Full cage design with 50% ultra-high strength steel
